

Policy and Vision Dampack International b.v.

Dampack International BV's policy is achieved by continuously aligning its business operations with customers' requirements. Dampack International BV distinguishes itself from its competitors with a trading company driven by knowledge and added value. Part of the operational management is the continuous focus on developing and maintaining sustainable partnerships and offering and guaranteeing high-quality products and work processes. To this end, customer satisfaction is measured periodically.

Important aspects are entrepreneurship, ambition, clout, speed of action and customer awareness.

It is the management's responsibility to ensure that appropriate resources and sufficient practically and theoretically trained staff are available within the company to practically implement the formulated policy.

Effective and controlled performance of activities is inherent in a management that is open to improvement and adjustment. The policy and the organisation as a whole are constantly subject to the determination of objectives, the implementation and assessment of preventive and corrective measures and, if necessary, adjustments to the policy. This whole is further shaped within the framework of the laws and regulations applicable to Dampack International BV.

To structurally implement the policy within the organisation, the management adopts an annual plan. The plan contains concrete objectives and is periodically monitored by the management for progress, thereby achieving continuous improvement.

Quality

As an aid to the realisation of the formulated policy, the organisation and control of processes was given structure by implementing a care system in accordance with the requirements and guidelines of the NEN-EN-ISO 9001:2015 standard.

Food packaging safety and quality

As an aid to the realisation of the formulated policy, the organisation and control of processes was given structure by implementing a food packaging safety system called BRC Issue 4.

In relation to the BRC standard, we intend to achieve safe and hygienic storage and transportation of food packaging through high quality work discipline of our employees so that no adverse effects on food safety occur. We ensure this system by carrying out periodic inspections and audits and by acting on issues arising from these inspections.

Periodic verifications will be carried out by the management to determine whether the quality system is operating effectively in accordance with the formulated policy.

Werkendam, August 2022

Mrs. Cindy Duizer-Damen
Director
Dampack International BV

Mr. Rory Damen
Director
Dampack International BV
